

We are living in such an era what will be particularly noted even in the world history table of 500 years, even 1000 years later from now! In Japan, natural disasters like the Great Hanshin-Awaji Earthquake, the Tohoku Earthquake, Tsunami and the nuclear accident have occurred successively due to climate change.

The world is bitterly experiencing the rampant communist dictatorship, the increase in refugees caused by anti-humanitarian governments, religious wars, impact of the 9/11 terrorist attacks and the rise of Chinese hegemony. The spread of "COVID-19", which is the manifestation of the global warming issue, is comparable to that of World War II. We are the living witnesses of this era.

Today, I have turned 80 years. In the coming five years, I would like to achieve the goal of 'enabling people all over the world to drink raw water with peace of mind'. So far, we have been working to facilitate safe and clean water in Asia, Africa and Latin American countries. Recently, interest in the POLY-GLU business among the developed countries of Europe and America has increased resulting in our business expansion. A small company in Osaka started its business with the mission to facilitate clean and safe water to the non-privileged people of the world without relying on donations or government subsidies and has made it possible to achieve its goal in only 20 years since its establishment.

There is no other example like this. *At first, the passion of a person changes the people around, then the changed people change the society and finally the society changes the world.* These words are likely to become a reality. Recently, we in collaboration with comrades from developed countries have been able to contribute to large-scale environmental improvement related to water.

Though I am now 80 years old, I get encouraged to live and work more and more when I see the technologies I invented are being used all over the world. I must have been utilized by the god of heaven as a 'genius'.

At my age of 80 I want to work harder and harder so that the word 'POLY-GLU' is recorded even in the history table after 500 years or even 1000 years. Let's sing Beethoven's 9th chorus all over the world by the end of this year 2021 after destroying the COVID-19 by applying safe vaccine!

20th of January, 2021

Dr. Kanetoshi Oda
