

Today is the United Nations Public Service Day 2022.

On this day, I remember the contribution of late Dr. William, the former President of IOM.
Russia's cruelty in Ukraine is like the behavior of devils. This kind of cruelty is possible only by Russia. One day, the name of Russia will disappear from the map of this world.
War is not the only challenge of the present world. Because, world is also facing the severe impact of climate change.
However, this phenomenon is not sudden and it is understood that the disasters will continue constantly in the future as well.

POLY-GLU water technology has been used all over the world for many years and as a result, the technology is said to be the "savior in the event of a flood".

For 20 years since its beginning, the price of a purifying agent that purifies 1000 liters has been kept at 100 yen without changing it. The POLY-GLU Team always try that a poor family can easily afford 'safe and clean water' without any hardships.

Is it heavenly help! US\$1 is now equal to 135 yen!

Whatever the currency rate, the POLY-GLU Team will continue working for the benefit of the disadvantaged people.

Our small company hopes that the suffering people in the world will have a bright tomorrow.
