

Caution!

In order to globally spread our inexpensive POLY-GLU Water Purifier safely, we have established our business agency in each country.

Recently we have noticed that in some countries some people buy a 20kg bag of our product from Japan and repack the product in small bags for sale in their countries without our permission.

Even some of these people claim to be our agents though we have not made any agreements with them.

"POLY-GLU water purifier is not a magic powder".
There are also "pesticides that cannot be separated".

However, our price is low and this low price is same anywhere in the world.
